# Geological Thin Section of Rocks & Minerals Slides

**rocksmins**<sup>®</sup>  
The Geology People.....

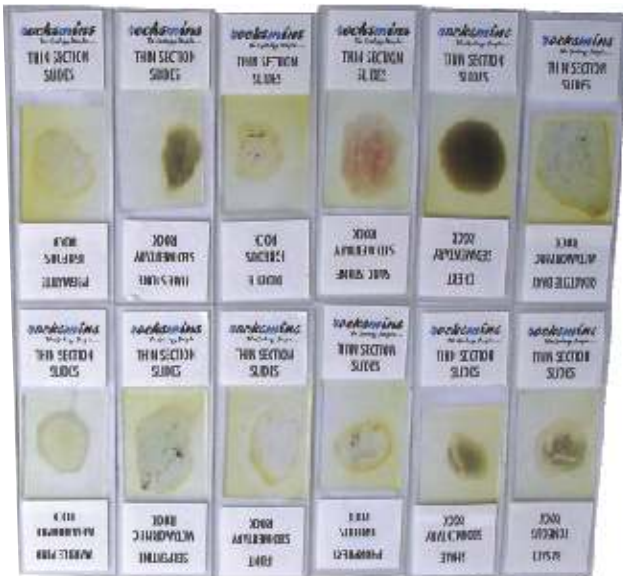

**Geological Thin Section of Rocks & Minerals  
Set of 20 Slides**

Rocks		Minerals	
1	Basalt	11	Amazonite
2	Breccia	12	Barytes
3	Gabbro	13	Calcite
4	Granite	14	Corundum
5	Lime Stone	15	Fluorite
6	Marble	16	Galena
7	Phorphyry	17	Muscovite
8	Quartzite	18	Pyrophyllite
9	Serpentine	19	Talc
10	Shale	20	Vesuvianite

**NEW**

Size of Slide 75mm x 25mm

"rocksmins" specialized in the production and supply of thin section microscope slides used as one of the two main methods of rock classification (the other being chemical analysis). Viewing thin section slides enables the geologist to identify the constituent minerals and textures of the rock. This, with information gathered from the site of collection, provides evidence of its chemical composition and the manner of its creation. The slides reveal fascinating and beautiful internal structures, opening a window to parts of our world normally invisible. View through a microscope a hidden universe of colours and shapes, spectacular and intriguing, even without specialist knowledge. All the sections thin enough that you can observe under the microscope with transmitted light (passing through section, from below) They all thin enough that You can see light through them. They all mounted with quality glass slides and covers with Transparent Glue.
